                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-CO) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-Al and UI-R-El clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-Al and UI-R-El library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1996)"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (bases 1 to 481)
                                                                                               Conservative
                                                                                                                                                                                                                                                                                                                                                               and UI-R-El libraries. The UI-R-Al library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-El library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-CO) was constructed as follows: PCR amplified CDNA inserts from a pool of UI-R-Al and UI-R-El clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-Al and UI-R-El library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electrony converted to
                                                                                                                                                                                                                                                                                                   bacteria (Life Technologies) to g
library. This procedure has been

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized rat placenta pool library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Email: msoares@blue.weeg.uiowa.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Noti Site and the oligo-dT track served to identify it as a clone from the normalized ventricle at 16.5 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-21, Seq primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       University of Iowa

124pp; English.

The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB56932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischamia, diabetes,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is rat GLUTX1.
                                                                                                                                                                                                                                                                                   hexose

English.

The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66922-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention at treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease.
